PEAKS & USGS MAPS

The listed maps are USGS topographic maps, 7½ minute, 1:24,000 series. The USGS has a useful free pamphlet, "CALIFORNIA - Index to topographic and other MAP COVERAGE" that locates these maps. Elevations, in feet, are taken from the maps. A + sign indicates the highest contour line on peaks without a spot elevation on the map. The first listed map contains the listed peak. Additional maps are named for peaks that are near a map edge or corner, or that have a part of the usual climbing routes on adjacent maps.

UTM COORDINATES

UTM (Universal Transverse Mercator) coordinates are useful for specifying locations on a map: peaks, road junctions or points on a climbing route. The UTM grid is defined by fine black lines on recent maps and by blue tick marks along the edges of older maps. The lines (or tick marks) are one kilometer apart and each has a unique two digit identifying number. A location to the nearest 100 meters is given by a six-digit number. The first two digits are the eastward coordinate from the top or bottom edge of the map and the third digit is the number of tenths of a kilometer to the east of the grid line. The fourth and fifth digits are the northward coordinate obtained from the right or left edge of the map and the sixth digit is the number of tenths of a kilometer to the north of the grid line. For example, Etiwanda Peak (17F), which is not named on the map, has UTM coordinates of 473874. This means that Etiwanda is 300 meters east (third digit) of the grid line defined by the blue tick marks that are numbered "47" on the top and bottom edges of the map. Similarly, it is 400 meters north of the grid line numbered "87" on the left and right edges of the map.
